

EFX-14D

G.fast daisy-chain solution

for fibre-like data-rates over existing copper access network all the way from CO to customer premises

In the areas where FTTx deployment is not yet feasible or not economical, provider may use **EFX-14D** DPU (with **EFS-02**) in a daisy-chain configuration in order to provide fibre-like data rates all the way from CO to the customer premises. DPUs may be powered remotely.

Solution is future proof since **EFX-14D** DPUs may stay in place also when fibre is deployed in a FTTdp scenario.
